

# INFLUX.AI – CUSTOMER SUPPORT DOCUMENT PACK

## 1. CUSTOMER ONBOARDING GUIDE

Customers begin by submitting the contact form with project details. A solutions engineer schedules a discovery call within 24 hours. Following scope validation, a proposal and timeline are issued.

## 2. SERVICE LEVEL AGREEMENT (SLA)

Standard response time: under 6 hours. Critical issues: under 1 hour. Production incidents receive priority engineering allocation and continuous monitoring until resolution.

## 3. COMMON TROUBLESHOOTING PROCEDURES

If chatbot responses appear inaccurate, verify document indexing status, embedding refresh cycles, and vector store availability. If deployment endpoints fail, confirm API keys, server uptime, and DNS routing.

## 4. DATA SECURITY & PRIVACY POLICY

Influx AI enforces encrypted data transmission, strict role-based access control, and enterprise-grade audit logging. Customer datasets remain isolated and are never reused across projects.

## 5. SUPPORT ESCALATION MATRIX

Tier 1: Support Desk. Tier 2: Solutions Engineer. Tier 3: Core Engineering Team. Escalations are triggered automatically for unresolved critical incidents after predefined time thresholds.
